

BRUS MASTER

Company presentation

For more than 10 years our company has projected and built houses from ecologically clean wood which is selected on timber lands.

Full cycle of manufacture of all materials and building constructions, from timber logging to finish grinding, modern Italian SCM equipment, application of innovative technologies and prompt architectural decisions are the base on which high-quality houses from «Brus Master» are built.

Our traditional wall material is regularized round timber in diameter of 160, 200 and 240 mm. The combination of «mortise and tenon» unique profile and natural linen tape provides dense connection of timber among them and interferes with through blowing off of walls. Special compensatory kerf in timber considerably reduces probability of occurrence of external cracks. Before packing of all wall material is treated with a wood preservative.

The most high quality wall material of «Brus Master» is glued laminated profiled lumber. For gluing of timber lame the best polyurethane adhesive Itapur Press-express is used. Developed by us the timber profile gives the most reliable connection of timber sets.

The building geography is rather extensive –these are hundreds of objects in the territory of Ukraine, Denmark, Poland, Greece, Lebanon and Italy.

Powerful industrial base, creative architectural bureau, landscape and interior design are the guarantees of unparalleled quality and durability of your house.
